1. Predicting the 4th Candle

Use the colors of the first three candles to find the supplied prediction for candle 4. The sequence is shown in the same order you provided.

Pattern	Prediction	Reported rate
Green → Red → Green	GREEN	59.49%
Green → Red → Red	GREEN	56.92%
Green → Green → Red	RED	54.98%
Red → Green → Red	RED	55.77%
Red → Red → Red	RED	56.13%
Red → Green → Green	RED	56.99%
Red → Red → Green	RED	57.27%

Quick takeaways

• Highest listed rate: **Green–Red–Green → Green (59.49%).**
• The other listed sequences predict Red for five of the six remaining patterns; Green–Red–Red is the other Green prediction at 56.92%.
• Treat the listed color as a historical tendency, not a certainty.

2. Predicting the 5th Candle

Use the colors of the first four candles to find the supplied prediction for candle 5.

Pattern	Prediction	Reported rate
Red → Green → Red → Green	GREEN	57.32%
Red → Red → Green → Green	GREEN	55.10%
Red → Red → Red → Red	GREEN	54.10%
Green → Green → Green → Red	GREEN	53.73%
Red → Red → Red → Green	RED	53.15%
Red → Green → Green → Red	RED	53.30%
Green → Green → Green → Green	RED	53.33%
Green → Red → Red → Green	RED	54.05%
Green → Red → Red → Red	RED	54.46%
Green → Green → Red → Red	RED	54.97%
Green → Red → Green → Red	RED	58.33%
Red → Green → Green → Green	RED	58.75%

3. Gap Patterns — Candle 1

These entries give the supplied prediction for the first candle after a gap. No additional conditions or gap-size thresholds were provided.

Market setup	Candle 1 prediction	Reported rate
Gap Up	**RED**	**58.48%**
Gap Down	**RED**	**52.45%**

A simple checklist before using a pattern

STEP	ACTION	WHY IT MATTERS
1	**Confirm the sequence**	Match every candle color in order, from oldest to newest.
2	**Check the context**	Consider trend, support/resistance, volatility, session, and the instrument being traded.
3	**Define risk first**	Set an entry rule, stop-loss, position size, and exit rule before taking a trade.
4	**Validate the statistics**	Find the sample size and test on unseen data, including spread, fees, and slippage.

Risk note
This document organizes the data you supplied; it does not independently verify the statistics or provide personalized financial advice. Candlestick patterns can fail, and a high hit rate may still lose money if average losses exceed average gains. Use paper trading and independent backtesting before risking real capital.
